- June 04, 2023 – evening hours (ice-breaking) - building of Faculty of Forestry
- June 05, 2023 – plenary session, debates in sections, poster session – Congress Centre of the University of Agriculture in Krakow, lecture halls of the Faculty of Forestry, in the evening exterior meeting in Puszcza Niepołomicka (part of the Promotional Forest Complex),
- June 06, 2023 – debates in sections, poster session, plenary session – lecture halls of the Faculty of Forestry, University of Agriculture in Krakow

Objective and scope of the Conference

The aim of the Conference is to present and discuss current scientific and practical achievements in the field of harvesting of timber and other forest raw materials, based on modern technologies and engineering management of stands. After the end of the pandemic period, the exchange of information on current scientific achievements and applications of research project results between foreign and national research centres will contribute to expanding theoretical and practical knowledge, on the use of productive and non-productive values of forests. Stepping up cooperation in ongoing and planned research and higher education, not only in the direction of rational management in state forests, but also in the direction of forestry in urbanized areas, forests around conurbations and private forests, should respond to the increasingly common emergencies, even on a global scale.

One section of the conference will be related to the end of the professional activity and retirement of Professor Janusz M. Sowa - long-time Head of the Department of Forest and Wood Utilization.

The Organizers anticipate content-related panels as follows: 1) Forest utilization and transportation reducing adverse events in the system human-technology-environment; **2) Ergonomics in forestry** in the light of a changing labour market; **3) Forest engineering and technology** as a platform for modern and technological forest management; **4) Non-timber utilisation of forest resources** as a response to the changing needs of societies.
