### General information
- **Semester**: summer
- **ECTS credits**: 6
- **Lectures total**: 15hrs
- **Classes/labs/field classes**: 15hrs

### Objective and general description
Macroeconomics is the study of behaviour of the economy as a whole. Macroeconomics concerns business cycles that lead to unemployment and inflation as well as the longer-terms trends in output and living standards. In analyzing Macroeconomics we focus on a few key economic variables: gross national product (GDP), the unemployment rate, inflation and export. That is why during these classes we will try to understand a role of the government policy impact on four main areas: output, employment, price stability and international trade. Also an overview of main economic concepts will be presented. The purpose of the Foundations of macroeconomic theory and policy course is to expand student's knowledge of the financial sector, stabilization policies, economic growth and international economics.

### Lectures
1. Fundamental concepts of Macroeconomics
2. Aggregate Supply and Demand - AS-AD model and Potential GDP
